Department of Computer Science & Information Technology

University of Sargodha

Project Advisor

Sir Hafiz Fasial

Project Members

Muhammad Azhar Javaid(183)

Muhammad Ramzan (126)

Abdussamad (154)

Class

BSITF13 4th (SS3)

Submission Date

19june 2015

PROJECT NAME

Data Base of LIBRARY MANMAGMENT SYSTEM in SQL SERVER 2012

GOURP MEMEBERS NAME & CONTACT NO

(1) Muhammad AZhar Javaid

CELL No# 03127400558

ROLL NO# BITE183

(2) Muhammad Ramzan

CELL NO# 03008136225

Roll No # BiTE126

(3) Abdusamad

Cell no 03075408811

Roll No # BiTE154

ACKNOWLEDGEMENT

**“IN THE NAME OF ALLAH WHO IS THE
MOST BENIFICAL MERCIFUL AND COMPASSIONATE”**

First of all we will thanks to ALMIGHTY ALLAH who gave us the strength, power, wisdom and complete the project.

**Secondly we would like to thank our subject
SIR HAFIZ FAISAL**

**He guides us in each and every
step of this project**

DEDICATION

“To our beloved PARENTS”

“Mr. Hafiz Faisal”

Project Title:-

Database system for Library Management system

Project Overview Statement

As You Know that a Library is collection of books in any institute .Librarian responsibility is to manage all the records of books issued and also returned on Manualy.

Case study

Current system:

All the Transaction(books issues & books returned) are manually recorded(registers.)

Students search books by racks it so time consuming

And there is no arrangement.

Also threat of losing records.

Project Aim and Objective

The project aim and objective are:

To eliminate the paper –work in library

-to record every transaction in computerized system so that problem such as record file missing won't happen again

Background of Project

Library Management system is an application refer to other library system and is suitable to use by small and medium size library .

It is use by librarian and library admin to manage the library using a computerized system .

The system was designed to help librarian record every book transaction so that the problem such as file missing will not happened again.

Development Enivornment

Operating system:

windows 7, window 8.1

Database :

Microsoft Sql server 2012

Hardware

Processor : Dual core or core i3

Ram : upto 2Gb

Design view

The library has the following tables in its database;

1. Books (**book_id**, ISBN,bookName, BOOKAUTHOR and bookedition)
2. student (**student_id**, studentname, student_email, student_address)
3. Staff (**staff_id**, staff_name, staff_address, staff_gender, staff_phone)
4. department (**department_id**, branch_name)
5. Issue (**issue_id**, issue_date, expiry_date, book_name, book_id)
6. Return (**return_id**, expiry_date, issue_date, book_id)

NORAMALIZATION OF TABLE

Why Normalization:

Database normalization is the process of removing redundant data from your tables in order to improve storage efficiency, data integrity, and scalability. Normalization generally involves splitting existing tables into multiple ones, which must be re-joined or linked each time a query is issued.

Given table is converted to its 1NF as follows.

- STEP NUMBER 1:

elimination of duplicative columns from table 1.

- Step number 2:

create separate table for each group of related data and identify each row with unique column (primary key).

2nd normal form

A table is in first normal form and each non-key field is functionally dependent upon primary key.

Now we'll take the table above and design new tables that will eliminate the repeated data in non key _field

To decide what fields belong together in a table, think about which field determines the values in other fields.

Create a table for those fields and enter the sample data.

Think about what the primary key for each table would be and about the relationship between the tables.

Mark the primary key for each table and make sure that you do not have repeated data in non-key fields.

Third normal form (3NF) requires that there are no functional dependencies of non-key attributes on something other than a candidate key.

A table is in 3NF if all of the non primary-key attributes are mutually independent

There should not be transitive dependencies.

Normalization of Tables in Database

ISSue_id	Book_id	Student_id
1122	110,120,320	bitE183

In the **ISSUE Table** there is repeating book_id . A student has issued 3 books.

After first Normalization

ISSUE_ID	book_id	Student_id
<u>1122</u>	<u>110</u>	<u>bitE183</u>
<u>1122</u>	<u>320</u>	<u>bitE183</u>
<u>1122</u>	<u>120</u>	<u>bitE183</u>

Second normalized Form:

In the following Student relation all attributes are dependent on the primary key StudID

<u>Student id</u>	<u>Name</u>	<u>Depid</u>	<u>Issue date</u>	<u>Expiry date</u>	<u>Phone</u>
<u>BITf13E183</u>	<u>Azhar</u>	<u>20</u>	<u>17-6-15</u>	<u>1-7-15</u>	<u>312</u>
					<u>7400558</u>

We can create two other relations from Student Table one is Department fields are fully dependent on the primary keys DEp_id

<u>DEp_id</u>	<u>Dep_name</u>
<u>11</u>	<u>CS & IT Department</u>
<u>22</u>	<u>Education Department</u>
<u>33</u>	<u>Economics Department</u>
<u>44</u>	<u>Laaw Department</u>

Student_id	Name	Issue_date	Expiry_date	Phone
BITf13E183	Azhar	15-6-15	1-7-15	312-7400558

Before third normal form

<u>Staff_id</u>	Name	Genda r	Designation	Address	City	state	cell
1101	Shaid	M	Librarian	House no 12 street 6	Sargodha	punjab	300-1234567

Database System of LIBRARY MANAGEMENT SYSTEM

1345	Riaz	m	Data entery	Statilete town	Sargodha	Punjab	0346-1234567
2264	Arshad	m	Naib qaisd	Raza garden	Sargodha	Punjab	0333-1234567

After 3rd Normalization

Staff table

<u>Staff id</u>	<u>Name</u>	<u>Gender</u>
-----------------	-------------	---------------

Staff conatact

<u>Staff id</u>	<u>Address</u>	<u>City</u>	<u>State</u>	<u>Telephone</u>	<u>cell</u>
-----------------	----------------	-------------	--------------	------------------	-------------

STUDENT Table before Third normalized Form :

Std_id	Name	Gender	Address	City	State	Phone	Dep_id

After third normal

Student_id	Dep_id	Department
<u>IT-113</u>	<u>C-26</u>	<u>Cs & IT</u>
<u>Lm-456</u>	<u>L-11</u>	<u>Law</u>
<u>Eng-98</u>	<u>E-41</u>	<u>ENGLISH</u>

Studentcontact table:

Student_id	Address	City	State	Phone
IT-111	Statlite twon	Sargodha	Punjab	312-1234567
Cs-786	Sahiwal	sargoda	punjab	300-1234567

Student table:

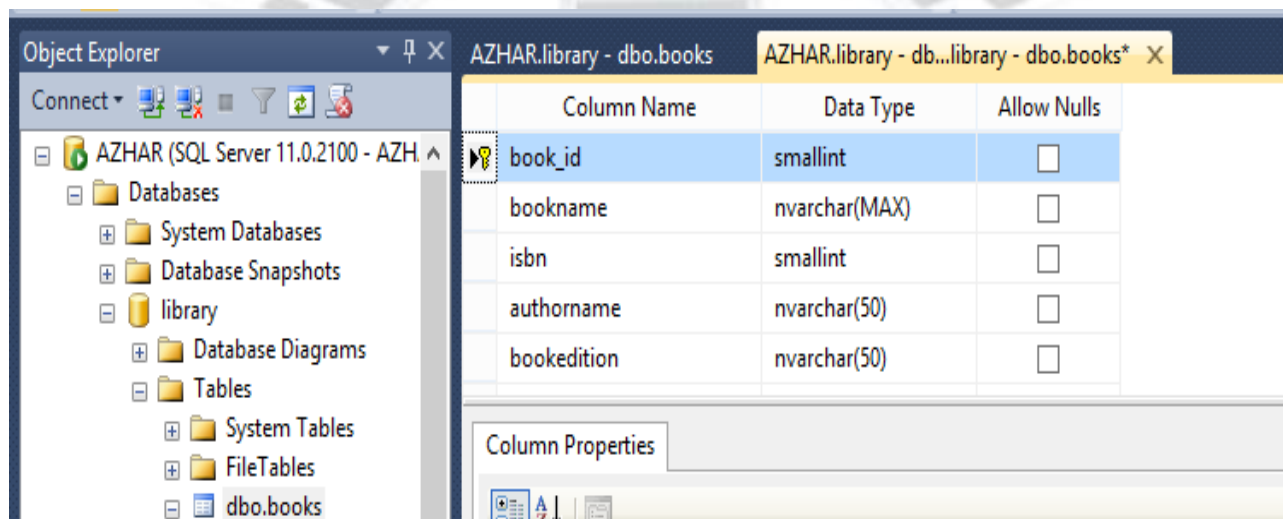

Student_id	Name	Gender	studentDepartment
------------	------	--------	-------------------

Normalization End

ARCHITECTURE OF TABLES IN SQL SEERVER 2012 AND RECORD

FIRST TABLE IS BOOK
